

BaseBind DustBloc

Road Binder and Dust Control

Make roads with insitu material
No need for quarry material
Can be used on lower grade or recycled
Road base

COOee

www.cooeeproducts.com.au

The unique feature of BaseBind DustBloc is that even though it mixes easily with water for application on the road, once applied and the water evaporates the product will never mix with water again.

Easily washes out of water truck, pump and sprays but will never wash out of the road.

Hydrocarbon leach tests were conducted with zero leaching hence Cooee won the Sustainable technology of the year award in 2009 and is specified for sensitive environmental and heritage areas.

Originally designed as a road binder/stabiliser and Redesigned also as a dust suppressant in 2006 with BHP due to water shortages in the drought.

DustBloc

- Award winning and proven product
- Water savings up to 80%
- Cost savings
- No road closure needed
- Uses standard water truck
- Non hazardous and environmentally safe

BaseBind

- Increased strength
- Stops water damage
- Much less maintenance
- Reduced long term costs
- Roads do not wash out in wet weather
- Non hazardous and environmentally safe
